Questions

Question 1

First, we will make a table to view the salaries of the NBA players in descending order by using the “select” and “arrange” functions to display the variables we want, in the order we want.

```
## # A tibble: 417 x 2
##   player      salary
##   <chr>      <dbl>
## 1 Kobe Bryant      25
## 2 Joe Johnson     24.9
## 3 LeBron James    23.0
## 4 Carmelo Anthony 22.9
## 5 Dwight Howard   22.4
## 6 Chris Bosh       22.2
## 7 Chris Paul       21.5
## 8 Kevin Durant    20.2
## 9 Derrick Rose    20.1
## 10 Dwyane Wade    20
## # ... with 407 more rows
```

From the table it is visible that Kobe Bryant has the highest salary of all the NBA players at \$25 million.

Question 2

Now we will create a boxplot that compares the distribution of the players’ salaries by position.

NBA Salaries 2015–2016 by Position

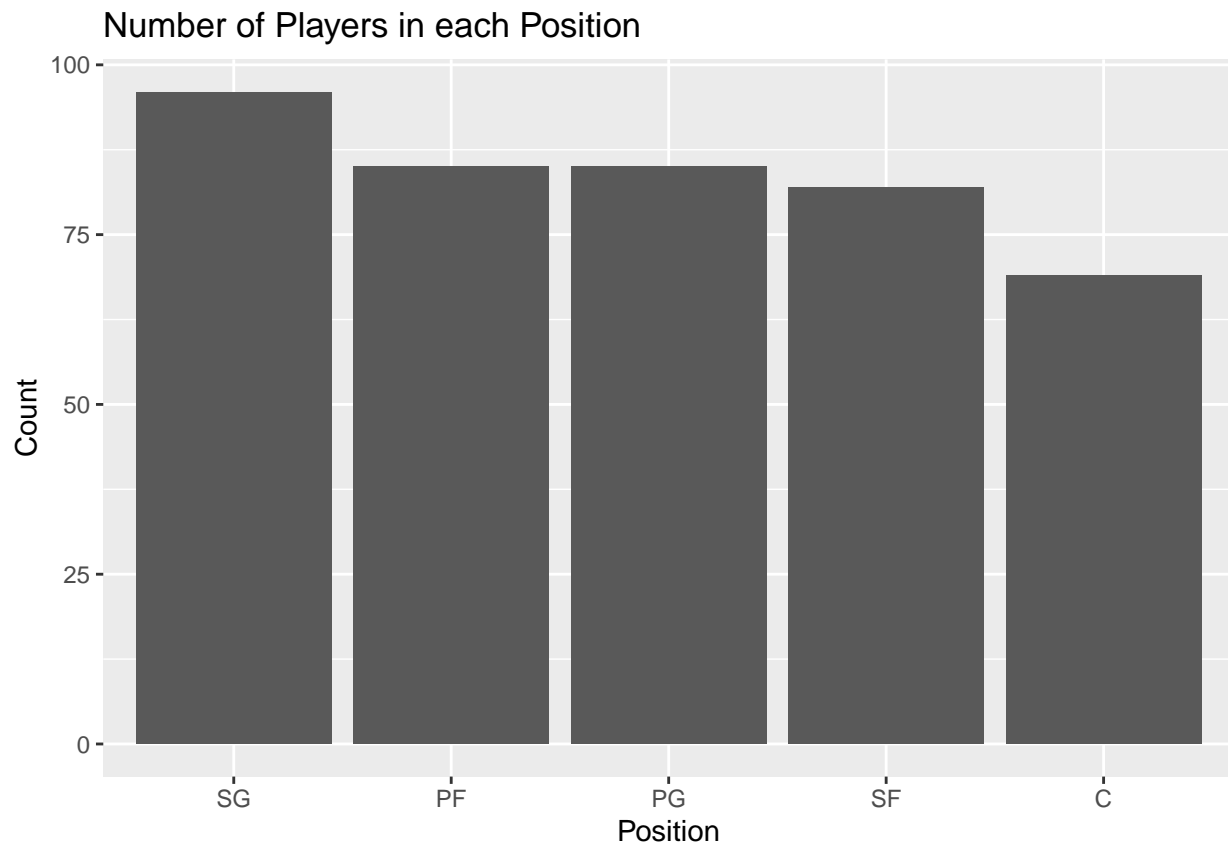

From this graph, we are able to see that the highest median salary is earned by players with the center position, while the lowest median comes from the shooting guard players. The ones who play center, however, also have a more even spread of their salaries, seeing as their interquartile range, or the middle 50%, is the largest of all the positions. There are also very little outliers in the center players' salaries, and there are several high outliers in all four of the other positions, so that is not to say that players playing a position other than center cannot earn a high salary.

Question 3

Now we will take a look at how many players there are in each position with “group_by” and the “count” function.

```
## # A tibble: 5 x 2
## # Groups:   position [5]
##   position      n
##   <chr>    <int>
## 1 SG         96
## 2 SF         82
## 3 PG         85
## 4 PF         85
## 5 C          69
```

With this table and bar graph, it is visible that there are the most players in shooting guard at 96, while the center position has only 69, which is the least amount of players playing a certain position. Additionally, there are 82 playing small forward, 85 playing point guard, and 85 playing power forward.

Question 4

Here a display is created in the form of a histogram to show the distribution of the salaries of the NBA players.

It is clear from this graph that a large number of players earned a salary between about \$1 million to \$3 million. It appears as though a large amount of players received a salary of up to \$10 million, but a minority of them receive more than that and very few reach \$20 million or more.

Question 5

Here, the average salaries per player in each team will be displayed.

```
## `summarise()` ungrouping output (override with `.groups` argument)

## Selecting by avg_salary

## # A tibble: 10 x 2
##   team                avg_salary
##   <chr>                <dbl>
## 1 Cleveland Cavaliers    10.2
## 2 Houston Rockets        7.11
## 3 Miami Heat             6.79
## 4 Golden State Warriors  6.72
## 5 Chicago Bulls          6.57
## 6 San Antonio Spurs      6.51
## 7 Los Angeles Lakers     6.24
## 8 Sacramento Kings       6.22
## 9 Oklahoma City Thunder  6.05
## 10 Dallas Mavericks      5.98
```

As seen, the three top earning teams are the Cleveland Cavaliers earning \$10.2 million on average, Houston Rockets earning \$7.11 million on average, and Miami heat with \$6.79 million on average. The second and

third highest earning teams do not have an extreme difference in average salaries per player, but the Cleveland Cavaliers have a high jump, with each player earning almost \$3 million more on average than the second highest earning team. It is possible that this may be due to the Cleveland Cavaliers having more famous basketball players that earn a salary that is considered to be an outlier.

Question 6

```
## # A tibble: 417 x 5
##   player      position team      salary salary_level
##   <chr>      <chr>   <chr>    <dbl> <chr>
## 1 Paul Millsap PF      Atlanta Hawks 18.7 High
## 2 Al Horford   C       Atlanta Hawks 12 Moderate
## 3 Tiago Splitter C       Atlanta Hawks 9.76 Moderate
## 4 Jeff Teague  PG      Atlanta Hawks 8 Moderate
## 5 Kyle Korver  SG      Atlanta Hawks 5.75 Low
## 6 Thabo Sefolosha SF      Atlanta Hawks 4 Low
## 7 Mike Scott   PF      Atlanta Hawks 3.33 Low
## 8 Kent Bazemore SF      Atlanta Hawks 2 Low
## 9 Dennis Schroder PG      Atlanta Hawks 1.76 Low
## 10 Tim Hardaway Jr. SG      Atlanta Hawks 1.30 Low
## # ... with 407 more rows
```
